David Chen

Principal Site Reliability Engineer & Cloud Platform Architect

Specialist in Multi-Region Kubernetes, eBPF Cilium Networking & Linux Tuning

Seattle, WA | +1 206 743 9102 | david.chen@fincloud.net | github.com/dchen-sre

PROFILE

Principal SRE with 10+ years engineering mission-critical cloud platforms, high-availability multi-region Kubernetes clusters, and automated chaos engineering frameworks. Specializes in low-level Linux performance tuning, eBPF network observability, and zero-downtime infrastructure automation.

EXPERIENCE

Principal SRE 01/2020 - Present

FinCloud Payments - Seattle

Architected automated multi-region Kubernetes failover handling $10B+ annual payment transactions with 99.999% availability. Tuned Linux kernel TCP/IP congestion control (BBR) and sysctl parameters.

Stack: Kubernetes, Terraform, AWS, eBPF, Cilium, Linux Kernel, BBR

Senior Cloud Infrastructure Engineer 03/2016 - 12/2019

DataMesh - Seattle

Spearheaded migration to Cilium eBPF networking, cutting cross-AZ latency by 35%. Deployed Prometheus, Grafana, and Thanos observability platform collecting 15M metrics/sec.

Stack: Docker, Kubernetes, Prometheus, Grafana, Thanos, Terraform

Linux Systems Administrator 06/2013 - 02/2016

Pacific Hosting - Bellevue

Automated configuration management and high-availability PostgreSQL and Nginx clustering across 500+ physical Linux servers.

Stack: Linux (Debian/RHEL), Bash, Python, Nginx, PostgreSQL

NOC Engineer 08/2011 - 05/2013

Northwest Telco - Seattle

Monitored nationwide backbone fiber routing, resolved BGP route flap anomalies, and managed 24/7 incident response.

Stack: BGP, OSPF, Cisco IOS, Wireshark, SNMP, Nagios

CORE SKILLS

Cloud & Orchestration

[Kubernetes] [Docker] [Terraform] [AWS] [Google Cloud] [ArgoCD] [Helm] [Kustomize]

Observability & Networking

[eBPF] [Cilium CNI] [Prometheus] [Grafana] [Thanos] [OpenTelemetry] [Service Mesh]

Systems & Reliability

[Kernel sysctl tuning] [BBR] [Chaos Engineering] [Incident Response] [SLI/SLO]

Scripting & Tooling

[Go] [Python] [Bash] [Linux Internals] [GitOps] [GitHub Actions]

SYSTEMS ARCHITECTURE & PROJECTS

k8s-chaos-operator

Custom Kubernetes CRD operator injecting network partition latency via Linux tc/netem.

ebpf-flow-tracer

Zero-overhead TCP connection lifecycle and packet drop analyzer written in C and Go.

EDUCATION

B.Sc. Computer Engineering

University of Washington

LANGUAGES

English	Native
Mandarin	Fluent
